

# Our History

- Founded in 2002 within Demiral Group Companies, managed by Mr.Kenan Demiral.
- Collected mushrooms are transferred to the nearest depots by the frigorific vehicles within the logistics network and then the mushrooms are processed there and sent to the central depot or to the depots abroad.
- Collect natural mushrooms from all around Turkey and export especially to the European Union countries in a very short time.

# Our Vision

As Akya, We aim to set and meet the quality standards of excellence in the sector we compete. Through a corporate structure, our goal is to be the best in our business and the best in our region.

Our aim is to grow by performing right jobs on behalf of our country and ourselves and to invest our gains into our work again and to create a respectable and reliable Turkish brand.

## Natural and Eatable Mushroom

Turkey is very rich in natural mushrooms that grow in different environments. Therefore, eatable macro mushroom types are picked in many parts of our country during the growing season and either used in cooking or traded.

With its 20 million hectare forest area and broad agricultural areas, Turkey has a very large area for mushroom growing in term of prairies.

We can not yet say that we are fully utilizing this grand mushroom potential. We must know about and protect the mushroom types that have economic value and find ways to utilize them in the best way.

According to the researches, today approximately 40 eatable mushroom types are collected with eating purposes and nearly 25 of them are subject of trade and sold in the markets or exported.

## Product Range Boletus Aereus

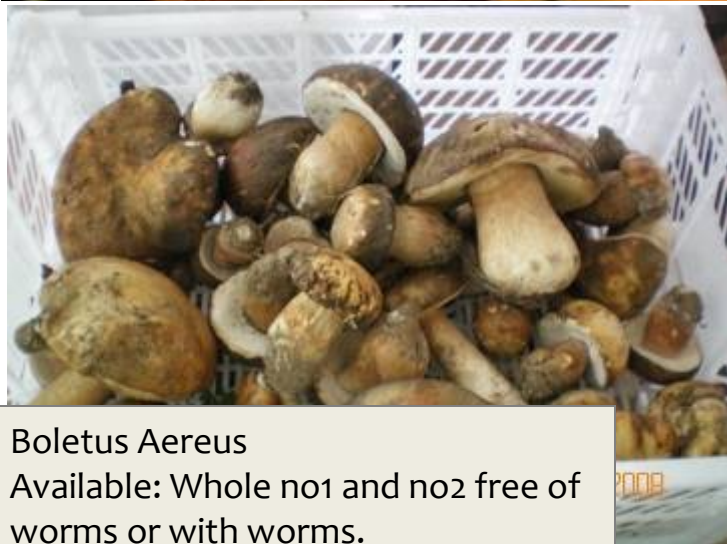

### Boletus Aereus

- I II III quality
- frozen, fresh, dry
- sliced, cubed
- 0-3cm
